**Results 1 - 18 of 18**    **short listing**

- 1** Receiver-driven layered multicast 93%

Steven McCanne , Van Jacobson , Martin Vetterli  
**ACM SIGCOMM Computer Communication Review , Conference proceedings on Applications, technologies, architectures, and protocols for computer communications** August 1996  
 Volume 26 Issue 4  
 State of the art, real-time, rate-adaptive, multimedia applications adjust their transmission rate to match the available network capacity. Unfortunately, this source-based rate-adaptation performs poorly in a heterogeneous multicast environment because there is no single target rate --- the conflicting bandwidth requirements of all receivers cannot be simultaneously satisfied with one transmission rate. If the burden of rate-adaption is moved from the source to the receivers, heterogeneity is a ...
- 2** Vendor screening in IT contracting with a pilot project 82%

Eli M. Snir , Lorin M. Hitt  
**Proceeding of the 20th international conference on Information Systems** January 1999
- 3** Reception and posters: Studying streaming video quality: from an application point of view 80%

Zhiheng Wang , Sujata Banerjee , Sugih Jamin  
**Proceedings of the eleventh ACM international conference on Multimedia** November 2003  
 An important aspect of improving streaming application performance is the streaming quality evaluation process. In this paper we introduce a set of alternative objective streaming video quality metrics, which are suitable for large scale deployment. Derived from an existent media application, our metrics are designed to capture the application behaviors disrupting the streaming video quality. We also present a set of experiments to demonstrate the effectiveness of these metrics.

#### 4 The effects of filtered video on awareness and privacy 80%

Michael Boyle , Christopher Edwards , Saul Greenberg

**Proceedings of the 2000 ACM conference on Computer supported cooperative work** December 2000

Video-based media spaces are designed to support casual interaction between intimate collaborators. Yet transmitting video is fraught with privacy concerns. Some researchers suggest that the video stream be filtered to mask out potentially sensitive information. While a variety of filtering techniques exist, they have not been evaluated for how well they safeguard privacy. In this paper, we analyze how a blur and a pixelize video filter might impact both awareness and privacy in ...

#### 5 Iterative transmission of media streams 80%

Michael Merz , Konrad Froitzheim , Peter Schulthess , Heiner Wolf

**Proceedings of the fifth ACM international conference on Multimedia** November 1997

#### 6 Unified power control, error correction coding and scheduling for a 80%

CDMA downlink system

Yuming Lu , Robert Brodersen

**Wireless Networks** March 1997

Volume 3 Issue 1

Transmitting multimedia data over a CDMA channel presents a new set of challenges. Sometimes, data demands will exceed the system capacity, in which case the system must make the most efficient use of its limited resources. The resources we consider are: fixed bandwidth available for each user and the transmit power budget for each cell. In this paper, we present our approach for unifying power control, variable forward error correction (VFEC), and scheduling for a downlink system by alloca ...

#### 7 Interactive posters: gaze interaction: AuraMirror: artistically visualizing 77%

attention

Alexander W. Skaburskis , Jeffrey S. Shell , Roel Vertegaal , Connor Dickie

**CHI '03 extended abstracts on Human factors in computing systems** April 2003

We present AuraMirror, a system that visualizes virtual windows of attention: the commodity of visual attention people exchange during interactions in small groups. AuraMirror acts as a dynamic 'painting' that passively gathers and displays attentional data by superimposing auras over each viewer's head in a real time video mirror. This permits users to see how they distribute their attention in group interactions, and the effect of interruption on this process. Finally, we describe how AuraMirr ...

#### 8 Models: Owner/user role in computational grid extension by non- 77%

dedicated resources

Goran Martinovic

**Proceedings of the 2003 international ACM SIGGROUP conference on Supporting group work** November 2003

Engagement of non-dedicated machines in the computational grid requires special attention by mapping. In addition to application, platform and mapping parameters, a human as a resource owner plays an extremely important role. The problem is easier for the owner/user who also requires grid services at the same time. The grid can provide a powerful support to CSCW. Resource concession can also be treated as cooperation in the grid extension. The proposed resource extension model is based on meetin ...

## 9 Planning in MAS: Searching for an alternative plan 77%

 Ariel Felner , Alex Pomeransky , Jeffrey S. Rosenschein  
**Proceedings of the second international joint conference on Autonomous agents and multiagent systems** July 2003

Suppose that an intelligent agent accepts as input a complete plan, i.e., a sequence of states (or operators) that should be followed in order to achieve a goal. For some reason, the given plan cannot be followed by the agent, and thus an alternative plan needs to be found --- but we would like the alternative plan to be as close as possible to the original. To achieve this, we define a number of *distance metrics* between paths or plans, and characterize these functions and their respectiv ...

## 10 Guest editorial: security in mobile computing environments 77%

 Jari Veijalainen , Ari Visa  
**Mobile Networks and Applications** April 2003  
 Volume 8 Issue 2

## 11 A model for the design of high performance protocols for a networked computing environment 77%

 Gary D. Law  
**Proceedings of the 1988 ACM SIGSMALL/PC symposium on ACTES** January 1988

The advent of high bandwidth local area networks means that it is now possible to interconnect large numbers of devices with widely differing processing capabilities in such a manner that the various devices may closely interact. Before such a system may be realised, it is necessary to define a set of conventions to govern the way in which the network nodes interact with each other. The Triadic Network Model is introduced to describe the interactions between personal computers an ...

## 12 CyPhone—bringing augmented reality to next generation mobile phones 77%

 Tino Pyssysalo , Tapio Repo , Tuukka Turunen , Teemu Lankila , Juha Röning  
**Proceedings of DARE 2000 on Designing augmented reality environments** April 2000

We describe a prototype implementation of a future mobile phone called CyPhone. In addition to voice calls, it has been designed to support context-specific and multi-user multimedia services in an augmented reality manner. Context-awareness has been implemented with GPS-based navigation techniques and a registration algorithm, capable of detecting a predefined 3-D model or a landmark in the environment. A new adaptive transport protocol has been developed to support real-time packet-switched ...

## 13 A platform for multimedia information exchange 77%

 Chung-Ming Huang , Chung-Ming Lo  
**Proceedings of the 1994 ACM symposium on Applied computing** April 1994

## 14 An integrated metric for video QoS 77%

 Nalini Venkatasubramanian , Klara Nahrstedt  
**Proceedings of the fifth ACM international conference on Multimedia** November 1997

77%

**15** Information technology and competitors: a case for collaborative advantage

Thomas W. Ferratt , Albert L. Lederer , Stephen R. Hall , Joseph M. Krella

**Proceedings of the 1995 ACM SIGCPR conference on Supporting teams, groups, and learning inside and outside the IS function reinventing IS** April 1995

**16** FDDI and timing requirements for image transmission

77%

B. Cousin

**Proceedings of the 1992 ACM annual conference on Communications** April 1992

This article presents the timing requirements for digitalized video transmission and the synchronous transmission mode of the Fiber Distributed Data Interface (FDDI) protocol. First, we develop a timed model of the FDDI protocol and we prove that it meets its standard requirement. Secondly, we verify that the temporal constraints for real time image transmission are fulfilled by the FDDI protocol.

**17** High-speed local area networks and their performance: a survey

77%

Bandula W. Abeyesundara , Ahmed E. Kamal

**ACM Computing Surveys (CSUR)** June 1991

Volume 23 Issue 2

At high data transmission rates, the packet transmission time of a local area network (LAN) could become comparable to or less than the medium propagation delay. The performance of many LAN schemes degrades rapidly when the packet transmission time becomes small comparative to the medium propagation delay. This paper introduces LANs and discusses the performance degradation of LANs at high speeds. It surveys recently proposed LAN schemes designed to operate at high data rates, including the ...

**18** Hierarchical conferencing architectures for inter-group multimedia collaboration

77%

Harrick M. Vin , P. Venkat Rangan , Srinivas Ramanathan

**ACM SIGOIS Bulletin , Conference proceedings on Organizational computing systems** October 1991

Volume 12 Issue 2-3
